

SENSO2ME

Safe, smart and simple care technology solutions

SENSO2ME develops care technology that serves gentle care, both at home and in a professional environment. The technological applications meet the complex needs of care-dependent people and care providers, with the aim of improving the care quality. Their ease of use also strengthens the bond between the care client, his family and care providers.

VITAL

Enjoy living longer at home with peace of mind

VITAL at home is a combination of smart sensors, practical push buttons and a care application that enables you to keep living at home independently as long as possible. Should an unusual situation arise, the wireless sensors and mobile alarm buttons will respond. The elderly person can always be reached thanks to an advanced listening/voice system. With VITAL you will enjoy your freedom for longer and you will have peace of mind.

Gentle care tailored to your needs

VITAL at work will also improve the well-being of the residents at a residential care facility. The smart sensors will register both the care calls and care visits. This will enable you, as a healthcare professional, to monitor your patient remotely.

PANDA

Your baby is in safe hands

Baby monitors will often fall short due to poor reception, measurement errors and interference. With PANDA, SENSO2ME is making safe monitoring of babies possible. The smart baby monitor will not expose your baby anymore to any harmful radiation and will offer complete coverage. Proactive alarms will report any screaming or crying in real time. In addition, whenever you want and wherever you are, you will be able to listen to the sleeping environment of your baby through a clear listening/voice connection. PANDA also offers advanced audio monitoring and a vital signs measurement.
