End-to-end encrypted Transfer, Collaboration & Cloud

By OnePrivacy S.A.

Founded in 2017, **OnePrivacy** is a new company based in **Luxembourg** that is **changing the way businesses, Governments and individuals use the internet.**

Laurent Ghelfi
Co-founder - Chairman
CEO - Star Invest

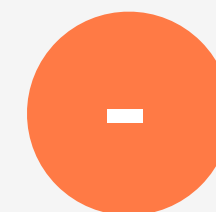

Didier Hoareau
Co-founder - CEO
PhD Computer Science
(Assistant professor in CS)

The problem: online collaboration and confidentiality with the cloud

- Share important files
- Collaborate by call or with comments
- Add or revoke easily access for (external) collaborators or customers
- Access to any content from any device

- > All my document are indexed
- > Collaborative edition (text, calendar,...)
- > High availability

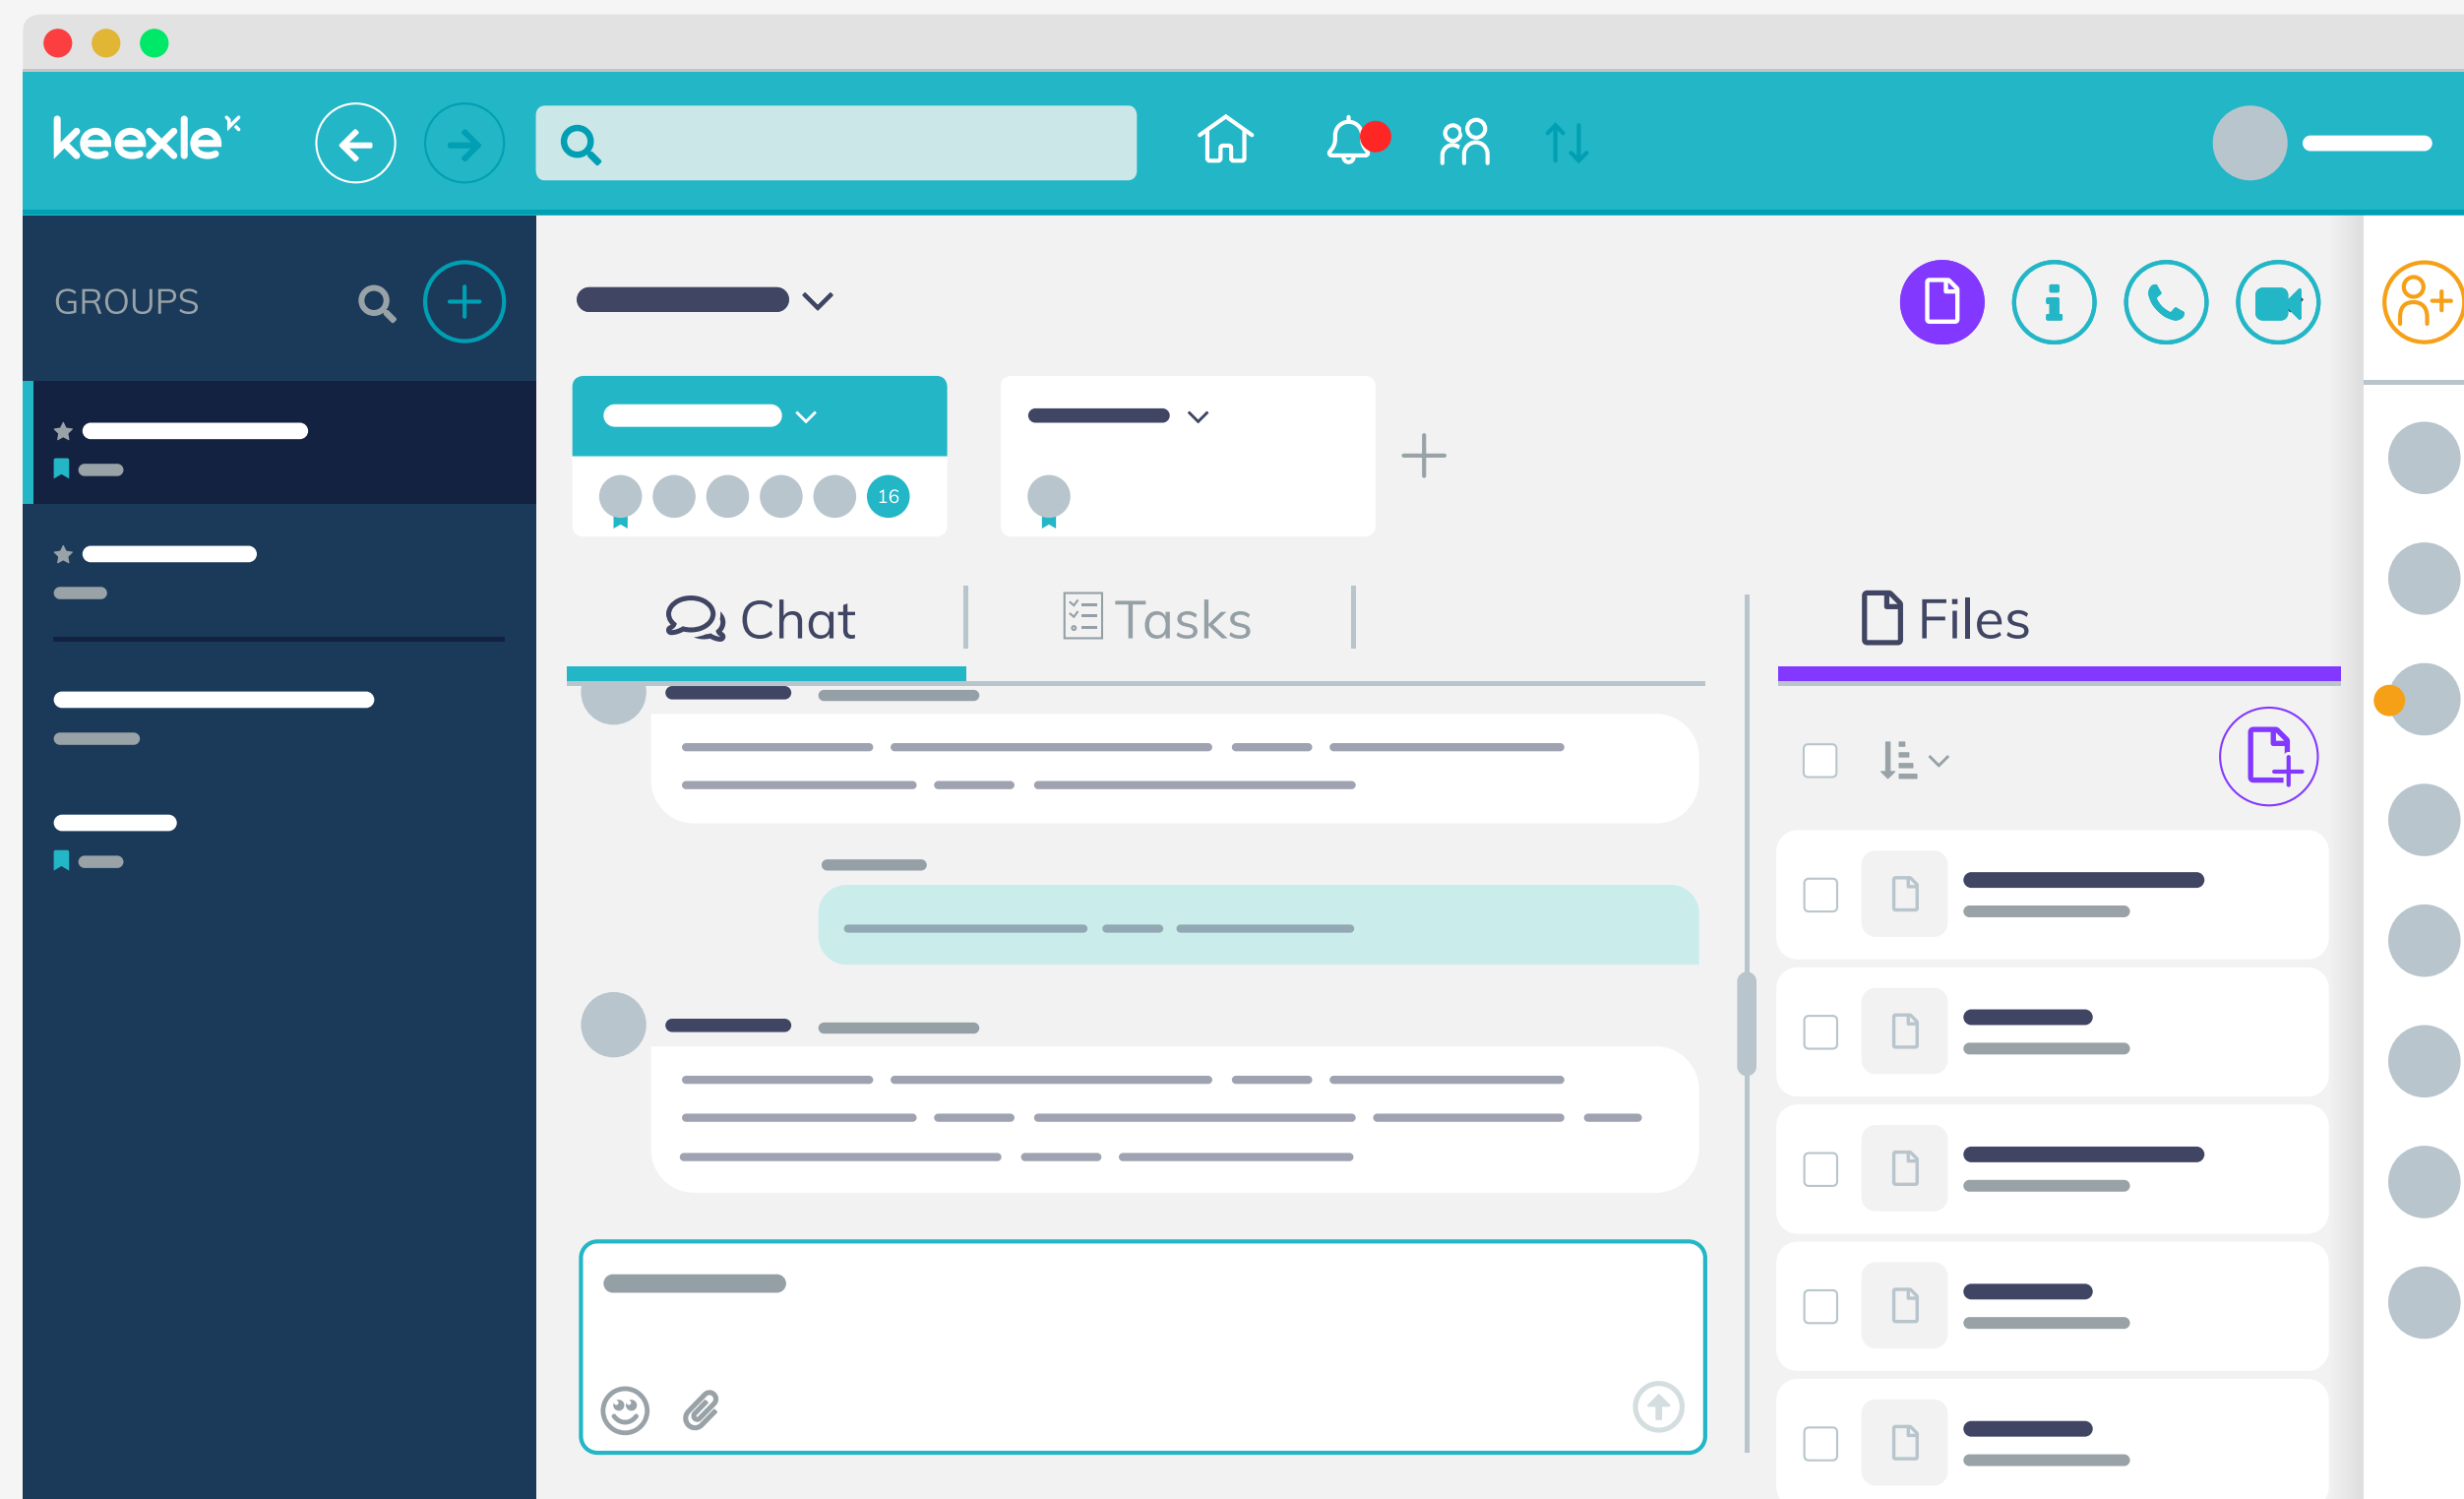

- > Profiling on uploaded data
- > Copyright
- > Cybersecurity threats
- > Your data can be made public

Keexle is a communication & collaboration tool that encrypts everything end-to-end

End-to-end encryption means everything is encrypted before it leaves your computer
and can then **only be decrypted by you or your intended recipient**

Implementing proper **end-to-end encryption** no longer means you have to sacrifice features and functionality

 **Private Chat**

 **Collaboration**

 **Cloud Storage**

 **File Share**

 **Group Chat**

 **Video/Audio Conference Call**

Even we can't access or view your content

Keexle is different because we do not have access your encryption keys.

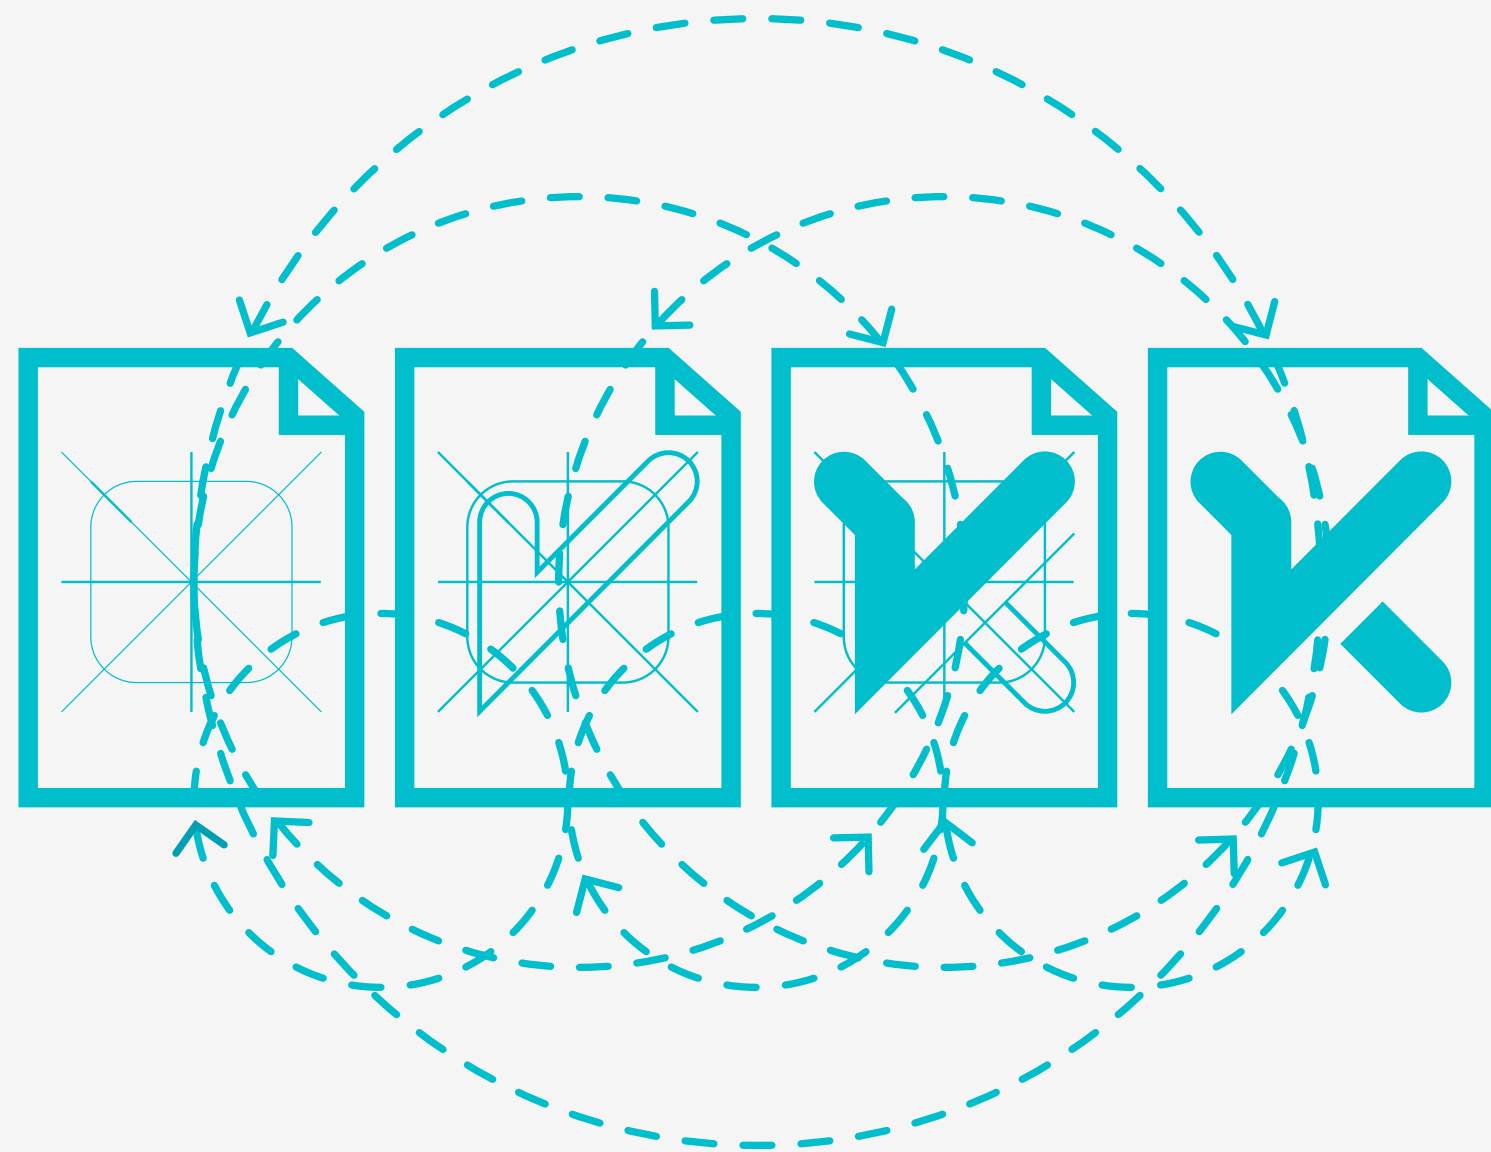

This guarantees that we at Keexle, can **never access your data**.

In addition, if someone was to hack our server, or yours, the data stored there is encrypted and therefore useless.

This is true **end-to-end encryption** and means you are always in control.

Encrypted Live Sync & Revisioning

With **Keexle**, as you work on a Document, Presentation or any other project, the changes are automatically synced as you work. This way everyone can always access the most up to date version.

Keep track of changes and view all previous versions of files

You can look back through all the versions and see who and when all the changes have been made.

TRANSFER

Receive files from anyone,
as easy as email, but totally secure

- 1 Give your client or customer your **unique Keexle URL**.
For example: **keexle.com/yourname**
- 2 Your customer uploads the sensitive files you need, straight **from their phone or web browser**.
- 3 **Files are encrypted end-to-end** before being sent from the sender's device
- 4 Receive and manage the files from the Keexle application

Everything we do is designed
from the ground up to be totally
private and completely secure.
